

# SlideShowPro Export for Photoshop CS2/CS3

slideshowpro

## Installation and Usage

Thanks for downloading SlideShowPro Export for Photoshop CS2 / CS3. These scripts enable you to publish web-optimized imagery for SlideShowPro for Flash, as well as a requisite XML file, using Adobe Photoshop. This guide will help you install and use the scripts with SlideShowPro for Flash.

### STEP ONE: INSTALL SCRIPTS

Inside the folder you unzipped will be two files with “.jsx” at the end. Copy or move both of these files to the following location:

(Windows)      C:\Program Files\Adobe\Adobe Photoshop CS3\Presets\Scripts  
(Mac OSX)      Macintosh HD:Applications:Adobe Photoshop CS3:Presets:Scripts

.....  
Note: Substitute “CS3” with “CS2” above if using Photoshop CS2.  
.....

### STEP TWO: PREPARE CONTENT

There are two ways to export web-optimized content for SlideShowPro for Flash from Photoshop. One, use imagery already opened in Photoshop, or two, use imagery *not* already opened in Photoshop using an external folder. If you would rather export images from within Photoshop, open those images now. If you would rather use an external folder, create a new folder anywhere on your computer and copy / move the original images you wish to export to that directory.

### STEP THREE: GATHER DIMENSIONS

Launch Flash. If you already have an FLA containing SlideShowPro for Flash, open that FLA now. Otherwise, create a new FLA, drag an instance of SlideShowPro for Flash to the Stage from the Components panel, and resize / style however you like (see the *SlideShowPro for Flash User Guide* for more). When complete, write down the dimensions displayed in the “Content Area” text field in the upper-left of SlideShowPro for Flash’s Live Preview, as well as the dimensions of the “Preview Size” thumbnail window above the navigation (see right). We’ll use these dimensions when exporting content from Photoshop.

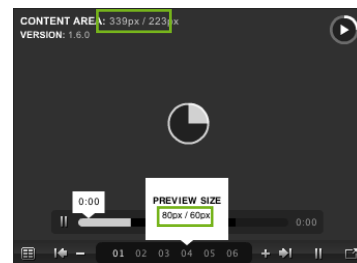

Figure: Dimensions to copy

### STEP FOUR: EXPORT FROM PHOTOSHOP

Return to Photoshop, and select File > Scripts > SlideShowPro-Export if exporting imagery from within Photoshop, or File > Scripts > SlideShowPro-Export-Folder if exporting from a folder of imagery. Follow the prompts displayed by either script.

### STEP FIVE: PUBLISH FROM FLASH

Return to Flash, and save your FLA to the root of the folder you exported content to from Photoshop. Select File > Publish to create an HTML / SWF. Open the HTML document in your web browser. Your images should now be loading!
